Pot 1-2

TOTAL POTATO STOCKS
ON DECEMBER 1, 1967

CORRECTED REPORT

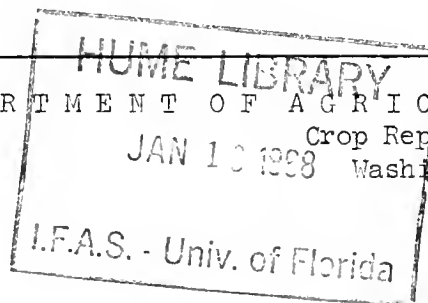

Reissued: January 3, 1968

Storage stocks of potatoes held by growers and local dealers in the fall crop producing areas of the country totaled a record high 164.6 million hundredweight on December 1, 1967, according to the Crop Reporting Board of the United States Department of Agriculture. Holdings at this level are 8 percent more than the 152.6 million hundredweight on hand December 1, 1966. These stocks consist of fall potatoes held for all uses on December 1.

Stocks in the eight eastern fall States, at 51.3 million hundredweight on December 1, compared with 48.4 million in 1966. Maine stocks, at 32.9 million, were 1 percent above 1966. Upstate New York holdings were below a year earlier while Long Island and Pennsylvania holdings were up. The eight central fall States had 33.1 million in storage this year compared with 30.6 million last year. Stocks in all of the major States in this area were above a year earlier. Stocks in the nine western fall States were 80.2 million this year compared with 73.6 million last year. Holdings were above December 1, 1966 in all States.

Disappearance of 1967 fall potatoes to December 1, was 67.4 million hundredweight compared with the record high of 75.1 million in 1966 and 69.7 million in 1965. Loss of 1967 production through shrinkage and decay to December 1 was much below last year. In 1966, losses in Idaho prior to December 1 were very heavy. Production of fall potatoes in 1967 was a record high 232.1 million hundredweight compared with 227.8 million in 1966 and 216.8 million in 1965.

Statistical Reporting Service
Pot 1-2 (12-67)

Movement of the current fall potato crop to fresh market and chippers through November 30, as indicated by rail and truck unloads in 41 cities, was slightly more in 1967 than in the same period of 1966. Processing of potatoes for other food uses (excluding starch and flour) was about the same as a year earlier. Movement of 1967 fall potatoes to starch factories has also been about the same as the 1966 level.

Sales of fall potatoes for all purposes, including fresh market, processing, seed and livestock feed, accounted for 84.0 percent of the 1966 fall production and 88.6 percent of the 1965 crop. The balance of the crop disappearance occurred on farms where grown and included losses through shrinkage and waste and use as seed, food in farm households, and livestock feed.

Fall Potatoes: Production, December 1, January 1, February 1, and March 1, total stocks, crops of 1959-67 in the 25 Fall States
